# Financial Visibility

This overview shows how to create a financial data foundation that reconciles data from a variety of sources. Teradata VantageCloud™ enables enterprises to automate and post timely month-end results, shorten transactional data reconciliation cycles, and streamline end-to-end front-office/back-office accounting data at various levels, covering all lines of business.

FINANCIAL DATA SOURCES

Structured
ERP systems, business applications, SaaS applications

ORACLE
ORACLE PEOPLESOFT
SAP

External
Party data, data exchange, etc.

Semi-Structured
csv, logs, json, xml (loosely typed)

Unstructured
Invoices, texts, free text (no structure)

INGESTING

1 **Ingest** data quickly across finance-structured systems and applications, third-party providers, and semi-structured and unstructured formats in near real time with the **VantageCloud data platform** and our pre-built **connectors** and **accelerators**.

2 **Leverage** a pre-built financial data model that's ready to **receive and structure data** to enable controlled, user-friendly access with a holistic 360° view of the enterprise.

3 **Enable** data analysts, data scientists, and AI developers to build **advanced analytical** models at scale on large volumes of data using **ClearScape Analytics™** and third-party analytic tools and languages.

4 **Execute and manage** models with an **AnalyticOps** framework. Define financial reporting views that consumers can use.

5 **Reconcile** data from a wide variety of sources into a trusted, compliant platform that's accessible to **business users** across the organization through a suite of **BI and reporting** systems.
